Tevron® LLC today announced support across its CitraTest® family of automated testing solutions for all Progress Software based applications.

CitraTest®, the world's first automated testing solution will full support for Progress Software based applications.

Chelmsford, Massachusetts, February 18, 2003 – Tevron®, LLC today announced support across its CitraTest® family of automated testing solutions for Progress Software based applications.

Because CitraTest® replicates the real user experience, corporations now have the ability to automated the functional testing of all their applications developed using Progress Software. In addition, the overall application response times and can accurately be measure and monitored.

CitraTest® replicates the actions of a real world user. Through intelligent Visual Basic script logic, CitraTest® directly interacts with the Progress Software based application like a real user would by dynamically analyzing the video output for uniquely defined images (i.e. menu items, buttons, icons, windows, etc.), issuing keyboard output, and issuing mouse activity. Any activity a user can do can be automated and replicated.

“Based on the unmatched testing accuracy provided by CitraTest®, for the first time, the enterprise can automate the testing and measure the overall response times of their Progress applications before going live, allowing them to ensure quality and perform to service level agreements with much greater confidence. Until now, there has been no automated fashion of creating intelligent, real client-side automated test scripts for the Progress environment. This is yet again an industry first and fills another major void”, explains Richard Byrne, CTO of Tevron, LLC.

To learn how CitraTest® can improve the testing of your Progress Software based applications, please call 1.978.441.9844 or visit www.tevron.com.

ABOUT TEVRON, LLC

Tevron, LLC is a pioneer in a new class of automated software testing solutions. Utilizing Tevron's proprietary Image Verification as a platform for its automated solutions, Tevron's mission is to provide automation solutions compatible with all operating systems, development environments and multiple hardware platforms. Tevron offers test automation solutions in both standalone software versions and totally non-invasive external appliance aided versions, as well as offering expert implementation and testing services.
