Press release - 11/20/2004

Sysload Software, specializing in monitoring, diagnosis and optimization of IT systems, has concluded a partnership with the North American company Tevron to develop a Windows application response time monitoring solution. Sysload Software is pleased to announce a technological partnership agreement with Tevron, a North American company based in New Hampshire. The partnership agreement allows the inclusion of Tevron's CitraTest® technology within the Sysload Feedback for Windows offering. This partnership will allow Sysload to add Windows end-user experience monitoring to its availability and performance monitoring solution.

Sysload Feedback for Windows measures the response time experienced by the users of any Windows client application (Lotus Domino, Oracle Applications, WebLogic, WebSphere, Citrix, SAP R/3, Siebel, etc.), by executing scripts generated by the Citratest® technology. The scripts are generated either by recording the user application or by manual creation. Sysload Feedback for Windows is a full client side automation solution as no component is installed on any application servers, thereby making the solution non-intrusive and independent of the application environment.

"By concluding this partnership we are proud to offer to our customers an unequalled diagnostic solution, directly making the correlation between the quality of the end-user experience and the system performance indicators" said Yann Guernion, Chief Operation Officer, Sysload Software.

"Through the partnership between Tevron and Sysload Software, enterprises across the world can now accurately measure the total End To End performance of any and every application through the deployment of CitraTest & Sysload technology" said Jay Labadini, Vice President of Business Development, Tevron.

About Tevron

Tevron is a pioneer in a new class of automated software testing and monitoring solutions. Utilizing Tevron's proprietary Image Verification as a platform for its automated solutions, Tevron's mission is to provide automation solutions compatible with all operating systems, development environments and multiple hardware platforms.

About Sysload Software

Sysload Software specializes in the monitoring, diagnostics and optimization of IT systems. Sysload Software develops and markets its software solutions to proactively control, manage and give an harmonized view of the availability and the performance of the IT infrastructure. Armed with a unique technology, the company has won a significant share of the European market and is developing its business worldwide. Sysload has over 30,000 production licenses throughout the world with more than 900 customer accounts.
